

TECHNOLOGY STANDARDS ASSESSMENT

TO GET WHERE YOU ARE
GOING, HELPS FIRST TO
KNOW WHERE YOU ARE.

"YellowWood Networks has put us in a position to grow in our industry, and highly recommend their services." - Rob Harlow, Controller – ZGM

TECHNOLOGY ASSESSMENTS

KEY BENEFITS:

- FIND NETWORK VULNERABILITIES
- REMAIN COMPLIANT
- PREVENT OPERATION WORK-AROUNDS
- PROTECT YOUR IT INVESTMENT
- AVOID BUSINESS INTERRUPTIONS AND DOWNTIME
- IDENTIFY NEXT BUSINESS ACTIONS

SERVICE OVERVIEW

With the constant change in technology solutions and services it is good business practice to periodically perform a business IT assessment. An IT assessment will provide helpful information to ensure compliance, best practice, and gauge the level of service and technology performance, productivity and profits (ROI).

A review of your technology on a regular basis, or during a change in business direction, will allow you to identify not just the changes needed to keep technology current, but also determine whether your technology is helping you reach your business goals.

SERVICE FEATURES

- Detail findings report
- Recommended action plan
- New product or service recommendations
- Solution implementation cost and project scope

KEY SERVICES

- IT Check List
- Business Impact Analysis
- Cloud Migration Assessment
- Risk Intelligence Security Assessment

Find Direction with a Proper Technology Assessment, and Start Today to Advance the use of Technology in your Business

TECHNOLOGY ASSESSMENTS

Without you, technology is just a bunch of silicon and plastic. However, when technology is properly applied, it can bare the weight of your business and free you to take on new projects, spend more time with family, and give you confidence. Find direction with a proper technology assessment, and start today to advance the use of technology in your business.

Details	Starting Price
IT Check List	
An IT Health Check is a complimentary review on the condition of your technology, that provides insight on how your business matches up against IT best practice. Diagnostics will be performed to uncover bigger, less apparent problems and neglect, as well as areas of potential disaster and loss. Areas reviewed will include security systems, antivirus, spam and content filtering, backups, security and backup of critical cloud applications and data, speed and performance and 140 other critical performance areas. There is no obligation on your part, this is just a way for us to make sure businesses have a plan and a way to introduce ourselves.	
The IT Check List will allow your business to set priorities on technology improvements, corrective actions, and future planning, a \$520.00 dollar value.	FREE
Business Impact Analysis	
The Business Impact Analysis (BIA) is to identify which business units/departments and processes are essential to the survival of the company. The BIA will identify how quickly your business units and/or processes can return to full operation following a disaster situation. The BIA will also identify the resources required to resume business operations, according to your business needs. The information provided in this analysis will help to identify shortfalls in technology, policy, procedure, and communication during a major technology failure, human error, or natural disaster.	
The Business Impact Assessment will provide helpful information for a Disaster Recovery and Business Continuity Plans.	\$750.00
Cloud Migration Assessment	
A Cloud Migration Assessment, will help identify the best hosted solutions to meet the demands of your business. This assessment will help you determine the key business processes, and tools and systems best suited in a hosted environment. This is best used when considering a move to cloud services for major systems, software, or databases.	
A Cloud Migration Assessment will be a source of helpful information when selecting a proper cloud solutions provider.	\$250.00
Risk Intelligence Security Assessment	
A Risk Intelligence Security Assessment, is a deep scans of your network, attempting brute force attacks, and reviewing updates, patches and holes in firewalls and other security software will provide you with the right information to keep your network secure. This is best used when meeting governing regulation requirements such as PCI, or if your business handles private personal information and need to follow PIPEDA guidelines.	
This Assessment will give you the knowledge to answer the following questions. Where is my data? Who has access to my data? Where are my vulnerabilities? How much will a data breach cost my company?	\$500.00
